Hiring Manager

Engineering Team

[Target Company Name]

[Company Address / Remote]

Re: Application for Software Development Engineer II (SDE-2)

Dear Hiring Manager,

I am excited to apply for the Software Development Engineer II position at [Company Name]. With over five years of hands-on experience designing and shipping production-grade distributed systems at Flipkart and Paytm, I bring a combination of strong engineering fundamentals, a track record of owning large-scale services end-to-end, and a genuine passion for building software that performs reliably under pressure.

In my current role as SDE-2 at Flipkart, I own the Order Management microservice that processes over two million transactions daily. One of my most impactful projects was leading the migration of four legacy monolithic modules into independently deployable Spring Boot microservices running on Kubernetes. This initiative cut deployment cycles by 60% and significantly improved fault isolation across the platform. When our peak-season traffic exposed latency bottlenecks, I drove a targeted optimization effort—combining query restructuring, Redis caching layers, and asynchronous processing—that brought our p99 response time down from 320ms to 190ms. These are not one-off wins; they reflect how I approach problems: diagnose systematically, design deliberately, and execute with the team.

I care about engineering beyond the immediate feature. At Flipkart, I designed a real-time inventory synchronization pipeline using Kafka that eliminated data inconsistencies across three regional warehouses. I worked alongside our Data Science team to ship a personalized delivery ETA feature that moved our CSAT score by twelve points. Earlier, at Paytm, I built the fraud detection module that reduced fraudulent transactions by 27%, and I maintained 85%+ test coverage across the services I owned. I believe good software is a team sport, which is why I have invested time in mentoring junior engineers—two of the three engineers I have worked closely with were promoted within eighteen months.

What draws me to [Company Name] is [specific reason—e.g., your investment in developer infrastructure / the engineering blog post on your data platform / your commitment to building tools for X]. I am particularly excited about the scale of challenges your team is tackling and the opportunity to contribute at that intersection of systems thinking and product impact.

I would welcome the chance to discuss how my background maps to your team's goals. My resume is attached, and I am happy to do a technical deep-dive into any of the projects mentioned above. Thank you for your time and consideration.

Warm regards,

Subhi Verma

Software Development Engineer II
